Computer Network Practical Exam List FH-2026

1	Use basic networking commands in Linux (ping, tracer, nslookup, netstat, ARP, RARP, ip, ifconfig, dig, route)
2	Build a simple network topology and configure it for static routing protocol using packet tracer. Setup a network and configure IP addressing, subnetting, masking. <pre>graph TD Router0[Router0 2811] --- Router1[Router1 2811] Router0 --- Router2[Router2 2811] Router0 --- Switch0[Switch-PT Switch0] Router1 --- Switch1[Switch-PT Switch1] Router2 --- Switch2[Switch-PT Switch2] Switch1 --- PC2[PC-PT PC2] Switch1 --- PC3[PC-PT PC3] Switch2 --- PC4[PC-PT PC4] Switch2 --- PC5[PC-PT PC5] Switch0 --- PC0[PC-PT PC0] Switch0 --- PC1[PC-PT PC1]</pre>

3	Build a simple network topology and configure it for static routing protocol using packet tracer. Setup a network and configure IP addressing, subnetting, masking. 
4	Build a simple network topology and configure it for static routing protocol using packet tracer. Setup a network and configure IP addressing, subnetting, masking. 
5	Perform network discovery using discovery tools (eg. Nmap, mrtg) Identify open, closed ports and services on target machine.
6	Use Wire shark to understand the operation of TCP/IP layers. - Identify and filter different protocols like TCP, UDP, ARP, ICMP etc. - Detect password in HTTP sites.
7	Set up multiple IP addresses on a single LAN.

8	Using netstat and route commands of Linux, do the following: • View current routing table • Add and delete routes Change default gateway
9	Implement error detection method using CRC
10	Socket programming using TCP or UDP
11	Perform Remote login using Telnet server
